ORCID and DataCite Interoperability Network

The ODIN mission: uniquely identify researchers and datasets and connect this information across multiple services and infrastructures for scholarly communication.

The project:

- Analysed the landscape of persistent identifiers
- Explored opportunities, and challenges, for interoperation among persistent identifiers, within and between types
- Developed proof-of-concept interoperability solutions

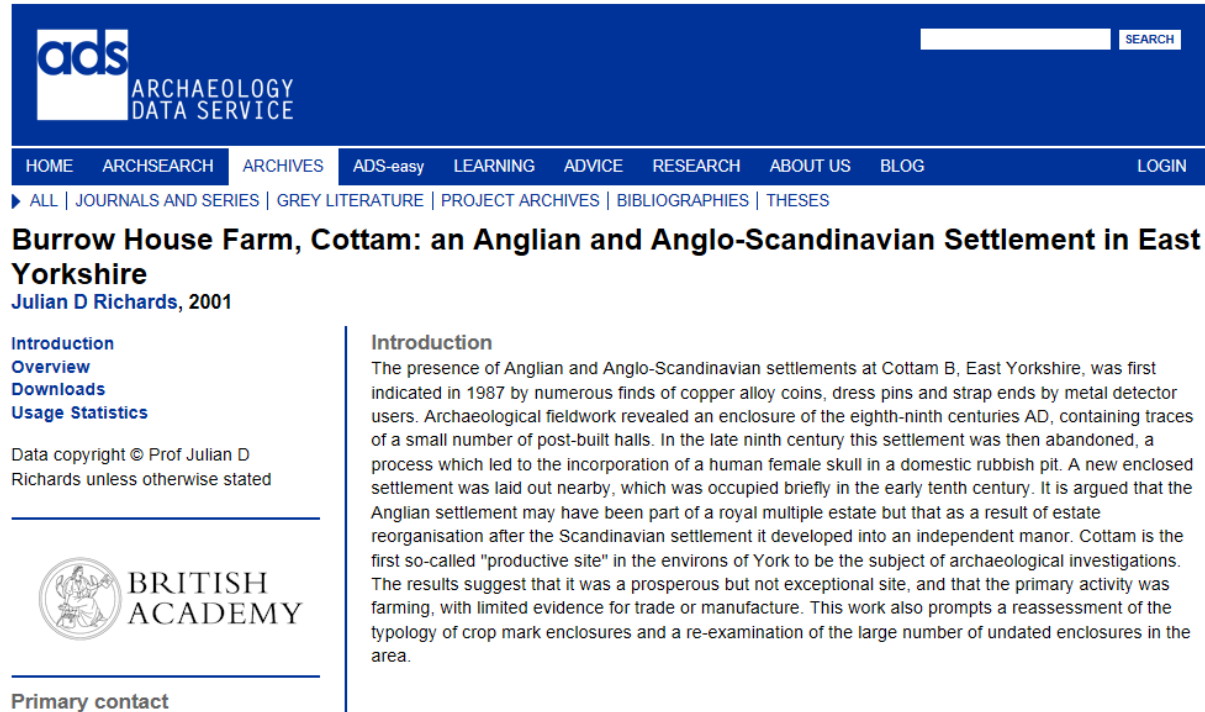

Supporting the research lifecycle: Discovery → Analysis → Sharing

Scenario 1: Starting from the data

- I am looking for data to combine with my own for meta-analysis
- I search a subject-data centre for data of interest
- I find interesting data and see that the author is linked

The screenshot shows the ADS website interface. At the top is the ADS logo and a search bar. Below the logo is a navigation menu with links: HOME, ARCHSEARCH, ARCHIVES, ADS-easy, LEARNING, ADVICE, RESEARCH, ABOUT US, BLOG, and LOGIN. A breadcrumb trail reads: ALL | JOURNALS AND SERIES | GREY LITERATURE | PROJECT ARCHIVES | BIBLIOGRAPHIES | THESEs. The main content area displays the title "Burrow House Farm, Cottam: an Anglian and Anglo-Scandinavian Settlement in East Yorkshire" by Julian D Richards, 2001. On the left, there are links for Introduction, Overview, Downloads, and Usage Statistics. Below these links is the text "Data copyright © Prof Julian D Richards unless otherwise stated" and the British Academy logo. On the right, there is an "Introduction" section with a vertical line to its left. The introduction text describes the archaeological findings at Cottam B, East Yorkshire, including copper alloy coins, dress pins, and a human female skull, and discusses the site's significance as a "productive site" in the environs of York.

Introduction

The presence of Anglian and Anglo-Scandinavian settlements at Cottam B, East Yorkshire, was first indicated in 1987 by numerous finds of copper alloy coins, dress pins and strap ends by metal detector users. Archaeological fieldwork revealed an enclosure of the eighth-ninth centuries AD, containing traces of a small number of post-built halls. In the late ninth century this settlement was then abandoned, a process which led to the incorporation of a human female skull in a domestic rubbish pit. A new enclosed settlement was laid out nearby, which was occupied briefly in the early tenth century. It is argued that the Anglian settlement may have been part of a royal multiple estate but that as a result of estate reorganisation after the Scandinavian settlement it developed into an independent manor. Cottam is the first so-called "productive site" in the environs of York to be the subject of archaeological investigations. The results suggest that it was a prosperous but not exceptional site, and that the primary activity was farming, with limited evidence for trade or manufacture. This work also prompts a reassessment of the typology of crop mark enclosures and a re-examination of the large number of undated enclosures in the area.

- Following the link I end up at the data creator's ORCID record
- Here I can see plenty more of their data and publications, across many data centres

The screenshot shows the ORCID profile page for Julian D Richards. The header includes the ORCID logo and navigation links for researchers, organizations, about, help, and sign in. The profile information is as follows:

How has ODIN helped this?

- Linking from a data centre landing page is promoted with our work on integrating identifiers into archive workflows

Scenario 2: Starting from the literature

- This research paper is an important new advancement in my research area
- But I now have more questions
- I look at the citations, and see that they cite the datasets they have used. There are 2 of them.
- DataCite DOIs have allowed me to access the data for the citation

J. Elliott et al. / *Social Science & Medicine* 107 (2014) 40–50 51

can lead to greater confidence in the robustness of findings. The wealth of data also allowed us to explore whether the association between neighbourhood cohesion and positive mental health is mediated or confounded by other factors including socio-economic circumstances, limiting long-term illness or disability, personality, and perceived level of social support. A further limitation is that neighbourhood cohesion and wellbeing are measured in the same respondents and so we do not have an independent neighbourhood-level measure of cohesion.

2. Conclusions

By using data from three British cohorts of adults in later adulthood this paper has demonstrated that there is a robust and moderate association between perceptions of neighbourhood cohesion and mental wellbeing. There is also evidence that the relationship between neighbourhood cohesion and mental wellbeing is somewhat stronger for adults over the age of 65. The use of qualitative interview material, including responses to an open-ended question on neighbourhood belonging, alongside the structured quantitative data provides some additional insights and underlines the affinity between social participation and neighbourhood cohesion. This could either indicate the importance of social participation as a factor enhancing perceptions of neighbourhood belonging or reflect the fact that neighbourhood cohesion facilitates participation in local groups. While the qualitative data do not provide direct insights into the causal mechanisms underlying the results from the quantitative models, they do highlight the way in which those over sixty appear more embedded and settled in their neighbourhoods than those aged over 50 which would be consistent with the finding of a stronger association between wellbeing and neighbourhood cohesion for older adults.

Acknowledgements

This project is part of a collaborative research programme entitled 'Healthy Ageing across the Life Course' (HALCYON). This programme is funded under the New Dynamics of Ageing initiative (<http://newdynamicsgroup.ac.uk/>), RES-353-25-0001. The funders took no role in the design, execution, analysis or interpretation of the data or in the writing up of the findings. The data collection from both NHSI and HCS cohort members has Medical Research Ethics Committee (MREC) approval. Analysis of the NCS25 data was approved by the ethics Committee at the Institute of Education, University of London (PFS 330 HALCYON). The authors would like to extend their thanks to all study members who provided information, members of the HALCYON study team, and Mia Stafford for her comments on an earlier draft.

 Literacy - Education

ABSTRACT

The Changing Faces study ran between January 2002 and July 2004. It aimed to track policy initiatives stemming from the 1970 adult literacy campaign to the launch of the Skills for Life Strategy as part of the National Literacy Strategy. Documentary, longitudinal and quantitative data were used alongside oral history interviews to collect the perspectives of three groups: adults with basic skills needs, practitioners involved in teaching and organising within Adult Basic Education (ABE) and English for Speakers of Other Languages programmes (ESOL), and people involved in making and managing policy in this field.

The study began with a small survey of practitioners being asked to talk about important events and people within ABE and ESOL between 1970 and 2000. These responses were built upon as well as the researchers own contacts to conduct email and face-to-face interviews as well as setting up group activities to collect memories, experiences and views from this period. The research focused on four case study sites of Leicestershire, Norfolk, Greater Manchester and North East London to examine how these experiences intersect within specific geographical areas.

Assorted archives of material are available at other archives.

ORCID and DataCite Interoperability Network

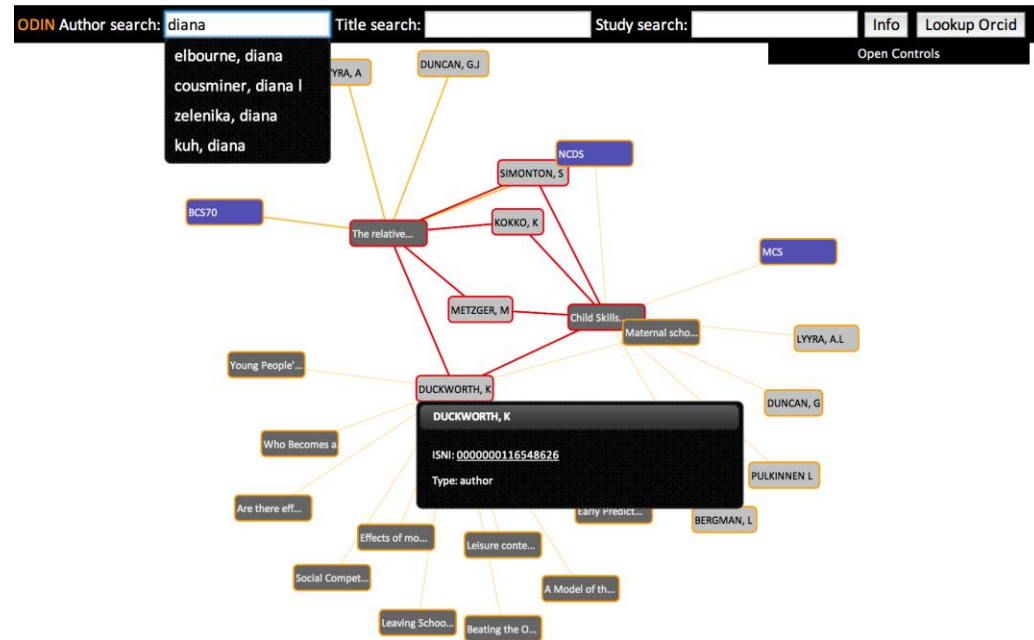

- I see the creators names are linked
- I click them and it takes me to their ORCID record
- Their current work has moved away from the question I'm not interested in
- But I find older datasets by these creators that seem very relevant

A screenshot of the ORCID iD profile for Philip Curran. The page has a blue header with navigation links: "FOR RESEARCHERS", "FOR ORGANIZATIONS", "ABOUT", "HELP", and "SIGN IN". Below the header, the user's name "Philip Curran" is displayed with a small ORCID icon and the URL "http://orcid.org/0000-0002-8225-9723". The profile is divided into sections: "Personal Information" (expanded) and "Works". Under "Biography", it lists "Head of Data Services for the MRC Lifelong Health & Ageing Unit at UCL" and "Programme Manager MRC Data Support Service Project". The "Works" section lists four publications, each with a dropdown arrow on the right: "Age at dieting onset, body mass index, and dieting practices. A twin study: Appetite 2013", "Characterizing the food environment: pitfalls and future directions: Public Health Nutrition 2013", "Measuring slope to improve energy expenditure estimates during field-based activities: Applied Physiology, Nutrition, and Metabolism 2013", and "Genetic and environmental influences on residential location in the US: Health & Place 2012".

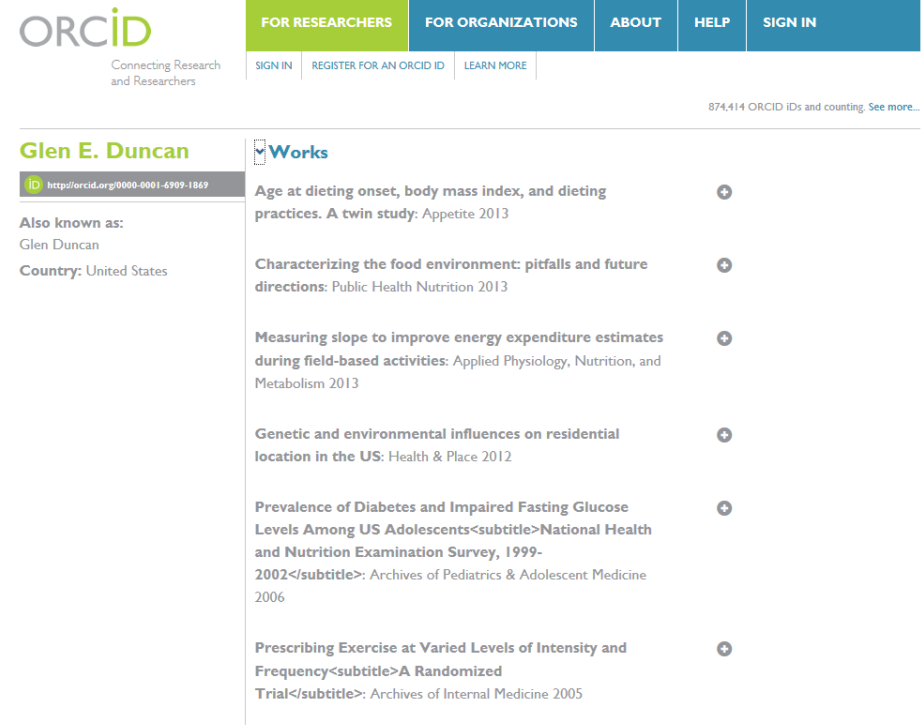

Not possible before ODIN

- The DOI takes me to a new data centre
- I see a graph of the authors on this dataset and how they link to various publications and datasets
- On clicking around, I see that the creators of these older datasets have previously worked with similar collaborators to me

- I follow the links back to their ORCID profiles and see their work touches on some of the questions I'm now starting to ask
- I have an idea that would help to pursue those questions, so I contact them to find out more about their current work

The screenshot shows the ORCID profile for Glen E. Duncan. The header includes the ORCID logo and navigation tabs for 'FOR RESEARCHERS', 'FOR ORGANIZATIONS', 'ABOUT', 'HELP', and 'SIGN IN'. Below the header, the user's name 'Glen E. Duncan' is displayed along with their ORCID ID and a link to their profile. The 'Works' section lists several publications, each with a plus sign icon to its right, indicating that the list is expandable. The publications listed are:

- Age at dieting onset, body mass index, and dieting practices. A twin study: *Appetite* 2013
- Characterizing the food environment: pitfalls and future directions: *Public Health Nutrition* 2013
- Measuring slope to improve energy expenditure estimates during field-based activities: *Applied Physiology, Nutrition, and Metabolism* 2013
- Genetic and environmental influences on residential location in the US: *Health & Place* 2012
- Prevalence of Diabetes and Impaired Fasting Glucose Levels Among US Adolescents<subtitle>National Health and Nutrition Examination Survey, 1999-2002</subtitle>: *Archives of Pediatrics & Adolescent Medicine* 2006
- Prescribing Exercise at Varied Levels of Intensity and Frequency<subtitle>A Randomized Trial</subtitle>: *Archives of Internal Medicine* 2005

Scenario 3: Sharing data

- I have written my paper and submitted it to a journal
- I have produced data that can be used to reproduce my experiment
- I would like to share my data

Project metadata for the Archaeology Data Service

Please complete this form as fully as possible with details of your project. This data will form the basis of an entry about your dataset in the ADS Catalogue, and underpins the computerised searching process that allows users to discover and retrieve information.

1. Title - please indicate the title (and any alternatives) for the dataset.
2. Description - please provide a brief summary (max. 200-300 words) of the main aims and objectives of the project and the content of the dataset.

How has ODIN helped this?

- I can link my paper AND my data to my ORCID profile
- There are +300,000 people named like me
